The EIA Training Resource Manual is intended to support capacity development in Environmental Impact Assessment. It is a tool for trainers who have some background experience and understanding of EIA. It is designed to assist them in preparing and delivering training courses that provide an understanding of, and basic capability in the application of EIA.
The manual is in five main sections:

**Section A** introduces the manual and how to use it.

**Section B** describes the role and importance of EIA training and capacity building.

**Section C** contains the outline of a Training Needs Analysis, some or all of which can be used to identify or confirm the specific training requirements.

**Section D** contains advice on how to design, present and evaluate training courses.

**Section E** is a series of training topics addressing the key steps involved in the EIA process. These topics are all in a similar format and provide session outlines; a selection of training activities; a reading list and other references; as the development of integrated approaches to impact assessment.

**Case Studies of EIA Practice in Developing Countries**, which describes the realities, and provides examples of implementation, of the main elements and steps of the EIA process.

With these materials, the manual can be used to design and present EIA training courses and programmes that draw on lessons of EIA good practice and relate these to the situation in developing and transitional countries. Above all, the manual should be applied and adapted based on EIA capacity building needs. These should be identified at the start of the process and before training commences. This analysis should also assist in incorporating local sources of information, contacts and case studies, which can be used to make the training more relevant, useful and interesting to course participants.

---

The Manual forms the centrepiece of a package of EIA training materials, which includes two companion or supporting volumes:

(1) *Environmental Impact Assessment and Strategic Environmental Assessment: Towards an Integrated Approach*, and (2) *Case Studies of EIA Practice in Developing Countries*.

---

**Manual design and content**

The manual is in five main sections:

**Section A** introduces the manual and how to use it.

**Section B** describes the role and importance of EIA training and capacity building.

**Section C** contains the outline of a Training Needs Analysis, some or all of which can be used to identify or confirm the specific training requirements.

**Section D** contains advice on how to design, present and evaluate training courses.

**Section E** is a series of training topics addressing the key steps involved in the EIA process. These topics are all in a similar format and provide session outlines; a selection of training activities; a reading list and other references; as
well as other resource materials such as overhead projector sheets and handouts. These sections are briefly described below.

**Section A: The manual in perspective**
This section describes the rationale, aims and approach of the manual. It provides an orientation for trainers and others on the use and interpretation of the manual and lists contacts and references that can be used to obtain additional information about the EIA process.

**Section B: Capacity building and the environment**
This section outlines a framework for undertaking EIA training based on the concept and principles of capacity building. It elaborates several perspectives that EIA trainers should bear in mind when using this manual, including precepts and measures to support and ensure the quality of EIA training.

**Section C: Training needs analysis**
This section of the manual first provides guidance about collecting background EIA information and materials, as part of training needs analysis. It can be used to identify or confirm specific EIA training requirements and to highlight the influence that the economic, political and social contexts may have on the presentation of the course. Several aids and tools for this purpose are described, including a training needs workshop to bring together a cross-section of EIA stakeholders.

The full workshop may not always be needed if the training needs are very clear and the context in which the training is undertaken is well understood.

Finally, this section on the analysis of training needs contains a short questionnaire that can be completed by each course participant before a course begins so that the trainer can gain an understanding of their individual needs.

**Section D: Course design, delivery and evaluation**
This section provides the tools to:
- develop course outlines
- present courses effectively
- prepare participant handbooks
- evaluate the success of a course

**Section E: Training topics**
A series of training topics is provided. These are focused on the key stages of EIA and other important related issues.

The training topics are structured to provide:
- background materials in the form of session outlines;
- training activities including detailed group activities and themes for discussion or speakers;
- references; and
- resource materials.

These materials have been packaged to encourage the trainer to incorporate local materials and information. The trainer should add or delete materials to suit the needs of the participants as identified during the training needs analysis. It is envisaged that practitioners developing new country-specific materials will make these available to their colleagues and will build up a network of training and practitioner contacts to encourage this exchange of materials.

**UNEP EIA Network**
UNEP is currently setting up a network of collaborating institutions which would assume responsibility to:

- customize the manual, reflecting regional requirements and cases;
- distribute the manual and support its use for EIA training in the regions;
- facilitate the launch of regional workshops to introduce the manual; and
- monitor and report back on developments and experience, through the Internet.

Collaborating institutions so far identified are:

- Asian Institute of Technology, (AIT), Thailand
- Centro Agronomico Tropical de Investigacion y Ensenanza (CATIE), Costa Rica
- Regional Environment Centre for Central and Eastern Europe (REC), Hungary
- Southern African Institute for Environmental Assessment (SAIEA), Namibia

The UNEP EIA Training Resource Manual was prepared by:

The Institute of Environmental Management and Assessment Centre for Environmental Assessment and Management, UK, (Barry Sadler and Karl Fuller, 2000); and

Environment Australia (formerly the Environment Protection Group), Canberra, Australia (Bronwyn Ridgway, Mary McCabe, John Baily, Robin Saunders, Barry Sadler, 1996).

With the guidance and technical support of the UNEP International Working Group on EIA and under the direction of Hussein Abaza, UNEP/Economics and Trade Branch, Geneva.

For institutions interested to be part of the UNEP EIA Network, and for other enquiries, inputs and feedback on the use of the UNEP EIA Training Resource Manual, please contact:
